

Feedback for Developer – Rota & System Improvements

1. Rota & Shift Management

- **Rename "Shift"** → Allow configurable label (Shift / Training / Other).
- **Subcontractor details** → Add **Subcontractor Company Name** field under Shift Details (not the owner name).
- **Minimum hours validation** → We requested a **notification** if guards' minimum required hours are not met. Instead, a **40-hour cap** was created. Please fix.
- **Employment reference number** → Each guard must have a **unique reference number** automatically assigned, shown on payroll.
- **Error messages** → Errors (esp. scheduling) remain hidden in background. They must **pop up in front**.
- **Override restrictions** → Add an **override option** for admins instead of fully enabling/disabling restrictions.

2. Rota Display

- Show only **clients/sites with active or upcoming shifts** in selected date range.
- Sort **clients alphabetically**, and their **sites alphabetically** under them (only active ones).
- Fix **zoomed-in display** → should fit screen without excessive scrolling.
- Replace **Shift ID** with: **Client + Site + Subcontractor + Guard + Shift Time**.
- Fix multiple shifts layout → last shift currently goes out of the box.
- Prevent guards from being assigned to **multiple overlapping shifts** (unless admin override).

3. Shift Notes

- Add option to leave **Notes** on shifts.
- Allow selection: **For Guard / For Control Room / For Both**.

4. Leave & Holiday Management

- **Admin leave entry** → If admin adds leave, it should auto-approve.
- **Holiday management** → Move under HR section.
- **Accrued leave** → System should show:
 - Total **hours worked**
 - **Accrued paid leave** (based on formula)
- **Paid vs unpaid split** → Example: Request for 80 hours, but only 40 hours accrued → allow **40 Paid + 40 Unpaid**.
- **Leave balances** → Must be displayed.

- **Entitlement** → Should be **pro-rated based on joining date & hours worked**, not just Jan–Dec.

5. Guard Availability & Holiday Overlap

- **Current Issue**: Guard cannot be scheduled if their holiday starts after shift begins.
- **Expected Fix**: Guards should be assignable if shift starts **before holiday time**.
- **Example**:
 - Holiday starts: **Oct 1, 09:00**
 - Shift: **Sep 30, 19:00 – Oct 1, 07:00**
 - ☒ Guard should be available.

6. Reports

- Reports requested are still missing.
- Please review our **current CRM reports** and replicate them in this system.

7. Invoicing & Payments

- Change currency from **\$ → £**.
- Add frequency options: **Weekly, Fortnightly, Monthly** (admin selectable).

8. System Formatting

- Date format everywhere must be **DD/MM/YYYY**.
- In guard profile, **NI** must be fully capitalized (not “Ni”).

9. Guard & Client Profiles

- Add ability to edit **passwords and emails** for existing guards & clients.
- **PIN field** → Explain or remove (not required).
- **Reference field** → Remove completely.
- **BRP fields** → Remove completely.
- **Signature field** → Move from “Guard Uniform” to **Documents**.

10. Vehicle Management

- Must be a **single-page form**, not multiple tabs.
- Vehicle Details display fields required: **Car Registration, Assigned To, and Relevant Document Expiry Dates**.
- **Odometer** → Must be in **Miles (not Km)**.

11. System Logs

- Add an **Edit Log** showing every action taken (who, what, when).

12. Maps & Geolocation

- Postcode not loading → must load location on map.
- Add option to set **tracking radius/parameters** per site (for geolocation & heatmaps).

13. Dashboard Alerts

- Dashboard should **play alarm + shift blinks until resolved**.
- Alerts required for:
 - Guard missed shift
 - Missed check call
 - Inactivity
 - Location turned off
 - Patrol missed
 - Panic button pressed
 - Shift starting within 24 hours not assigned
- Use **different colors** for each alert type.

14. Customization & User View

- Each user should be able to **customize visible fields** in any section.

15. Excel Status Tracking

- Please review **all previous feedback files**.
- Fill the **Excel sheet** with status (Done / Pending / In Progress) for every request.

16. Shift Editing & Assignment

- **Current Issue:** There is no option to **edit multiple shifts at once** or **assign multiple shifts to a guard** in bulk. Each shift has to be edited/assigned individually, which is time-consuming.
- **Expected Fix:** Add option to **bulk edit and assign shifts**.
- **Example:**
 - Select 5 unassigned shifts for a site → assign them all to Guard A at once.
 - Update timings for multiple shifts in one action instead of editing them one by one.
